The Rich Payment Calculator Lite Version

Thank you for downloading the Rich Payment Calculator Lite Version!
This Trial Version can be used on any site you want, the only limitation is that you can configure only a few options, whereas in the commercial version you can configure all aspects of the Calculator, from functionality to appearance, as well as integrate it with other applications.
In the Lite Version you can set the interest rate, and the maximum and minimum loan amounts the user will be able to select.
If you have any doubts or questions regarding our software, contact us, or try the Rich Financial Tools forums

Quick Start

To have your calculator set up and working as fast as possible on your website, follow these instructions:

1. Select in which page of your site you are going to include it.
2. Upload to a folder in your website the following files, that are included In the package you downloaded. These files should be uploaded to the same folder where the webpage that will include it is located:
    a. The javascript code that includes the flash file: **SWFObject.js**
    b. The flash file containing the calculator: **PMTCalculator.swf**
    c. The background image for the calculator: **rich_financial_02_Generic.jpg**
3. In the page where you want to include the calculator, insert the following code in the <head> section.
    ```
    <script language="javascript" src="swfobject.js"> </script>
    ```
4. In the <body> section, paste the following code:
    ```
    <div style="width:325px; height:165px; overflow:hidden;">
        <div id="flashcontent1">
            <p style="margin:10px">The Rich Financial Tools Require Adobe Flash
            Player 7. To install it, <a
            href="http://www.adobe.com/go/getflashplayer">click here.</a> </p>
        </div>
        <script type="text/javascript">
            var so = new SWFObject("PMTCalculator.swf", "Rich_Payment_Calculator",
            "1000", "1000", "7", "#FFFFFF");
            so.addParam("wmode", "transparent");
            so.addVariable("XMLPrefsURL", "prefs.xml");
            so.addVariable("noRandomXMLSuffix","1");
            so.addVariable("LAYOUT_MODE_FILE", "layout.xml");
            so.addVariable("LAYOUT_MODE_FOLDER", "");
            so.addVariable("LAYOUT_MODE_EDIT_ENABLED","0");

            //Customizable values. Change the following values to alter the
            functionality of your calculator
            so.addVariable("RATE_INITIALVALUE","750");
            so.addVariable("AMOUNT_MAX","100000");
            so.addVariable("AMOUNT_MIN","1000");
            so.addVariable("AMOUNT_STEP","1000");
            //End of customizable values

            so.write("flashcontent1");
        </script>
    </div>
    ```
5. Change the values in the code to customize the calculator to your needs. You can change the lines below the line that says "Customizable values". This values are:
    a. **RATE_INITIALVALUE:** the interest rate of the calculator. It must be set in basic points. For example, 7.5% will be 750 basic points.
    b. **AMOUNT_MAX:** the maximum allowed value for the loan amount.
    c. **AMOUNT_MIN:** the minimum allowed value for the loan amount.

d. **AMOUNT_STEP:** how much the loan amount will change when the slider is used.

Example:
Suppose you want to set up a payment calculator for loans between $10.000 and $50.000, with an interest rate of 11.54%. This should be the code you should use in the Customizable values section of the Javascript code:

```
//Customizable values. Change the following values to alter the
functionality of your calculator
so.addVariable("RATE_INITIALVALUE","11540");
so.addVariable("AMOUNT_MAX","50000");
so.addVariable("AMOUNT_MIN","10000");
so.addVariable("AMOUNT_STEP","1000");
//End of customizable values
```

6. That's it! Your calculator should be up and working!

Getting support

The Rich Payment Calculator Commercial Version

The Rich Payment Calculator Commercial Version gives you much more than the Lite Version:
- Customize every aspect of your calculator functionality, from how the user inputs the data (six different inputs modes for each component), to how the result is displayed, to each line of text that appears on the calculator.
- Customize every aspect of your calculator appearance, from colors and font faces to the exact position of each component, using our advanced Flash Active Editing technology, which allows to place each component exactly where you want in a visual WYSIWYG way.
- Integrate your calculator with other web applications, such as shopping carts.
